PROJECTS

- **AppTracker:** Full stack application created to replace storing job applications in spreadsheets. React Context API used for state management. Backend built with a RESTful API using Node, Express, and MongoDB for CRUD operations. JSON Web Tokens used for authentication. Custom MongoDB user and application schema. Passwords hashed for encryption. API tests and automation done with Postman.
Deployment: <https://apptracker-app.herokuapp.com/>
Repo: <https://github.com/Brian-Holland/AppTracker>
- **IT Log MERN App:** RESTful API designed to allow users full CRUD operations over a database of IT logs and technicians. Built using Node, Express, and MongoDB and connected to a React/Redux front end. Custom database model schemas. Allows search queries on IT logs. API tests and automation done with Postman.
Deployment: <https://it-log-mern-app.herokuapp.com/>
