PROJECTS

- **AppTracker**: Full stack application allowing users to keep track of job applications. React Context API used for state management. Backend built with a RESTful API using Node, Express, and MongoDB for CRUD operations and custom middleware for authentication on protected routes. JSON Web Tokens used for authentication. Custom MongoDB user and application schema. Passwords hashed for encryption.

  Deployment: https://apptracker-app.herokuapp.com/

  Repo: https://github.com/Brian-Holland/AppTracker

- **IT Log Backend**: RESTful API built to allow a user full CRUD operations over IT logs and technicians. Built using Node, Express, and MongoDB/Mongoose. Custom database model schemas. Custom server scripts. Tested and published with Postman API documentation.

  API Docs: https://documenter.getpostman.com/view/9550527/TVt2bPDe
